### Conference Notification

- The Fifth International Conference on the Applications of Digital Information and Web Technologies (ICADIWT 2012)
- Seventh International Conference on Digital Information Management (ICDIM 2012)
- The Second International Conference on Innovative Computing Technology (INTECH 2012)
Editorial

In this issue, we present six papers on varied themes; each of which introduces the novel techniques.

The first paper investigates the possible application of lexicographic ontologies for Greek Wikipedia articles. The next paper has discussed the Learning Support Service System in the learning process. The next paper is incremental in developing good architectures for Loop Diagram in system dynamics. The fourth paper has introduced and discussed an enhanced technique for online signature verification system. The next paper discusses the novel search method for Requirement-Aware Functional-Block Selection and Composition for a Flexible Network. The final paper addresses a novel kernel in text categorization that is experimented in news data set.

Hope the papers in this issue are more significant and we plan to publish a couple of special issues in the coming periods.
